

When you purchase a pair of ugg boots the 1st thing you think of is how can I keep them clean. After all, the boots you see celebrities sporting look brand new. In truth they are not that hard to look after as you would expect from these varieties of a versatile boot.

If you set on your ugg boots in extreme weather including heavy snow or heavy rain then you'll want to take immediate steps to dry them out after sporting them. No boot is immune for the harsh effects of nature.

To manage your Ugg boots inside of the same condition as the day you bought them, like the celebrities do, just follow these basic tips.

1. Ugg boots are made from sheepskin. Do not treat them like they are carved out of rock, if they get dirty clean them gently possessing a cloth and lukewarm water. Do not attempt to set them inside of a washing machine, and yes I have seen it done so you would not wish to place on the outcome.

2/ In case you do set on your ugg boots in the snow, or out in heavy rain or when you walk in sea water or on a sandy beach as you get home place old newspaper in your ugg boots, if they are quite wet. This will assist them to dry out. If they are dry use a damp cloth to clear any dirt off them. Do not set them on top of a radiator or anywhere fairly hot. This will damage them.

3/ you could also find cleaning products specially made for ugg and other makes of sheepskin boots that clean and protect them from your harshness through the elements. Keeping your boots in the same condition as the day you bought them.
